Construction

Customer

A customer-focused general contractor, with completed projects totaling more than \$15 billion throughout the U.S. and in 35 countries on five continents.

Customer need

The customer wanted a software solution that would help manage and track QR codes while recording all clock ins and outs automatically as the supervisor scans the QR code of the employees to clock them in and out at job sites.

New workflow with allGeo

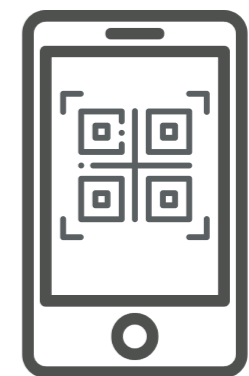

allGeo deployed a custom time and attendance tracking system that helped the customer automate and streamline many aspects of their workflow. Their workflow started with setting up allGeo generated QR codes at their job sites. By scanning these QR codes, managers were able to clock in and clock out employees at the job site.

Here are the key reports they generate using allGeo:

- **Breadcrumb Report:** This report provides the location trails of the employees for a particular date range. The location trails can also be seen in allGeo's map view.
- **Standard Manual Report:** This report shows the time clock punches and their locations through the entire day, miles between them, and notes or messages if taken during that punch.
- **Barcode Message Report:** This report shows the total number of scans attached with each check-in/out event.
