## Industry

Property Management (Real-estate)

## Customer

A real estate company focused on procuring, renovating, relocating, and supervising mid-market rental apartment buildings. They own and oversee properties primarily in Western Canada.

## Customer need

They found it challenging to track over 250 field employees working different shifts and capture time clocking data accurately. Hence, they wanted to automatically track field staff locations during their shifts, clock them in and out from the Geofenced location, and record their hours accurately.
## New workflow with allGeo

allGeo delivered an entirely automated time-clocking solution for their field staff. Now the customer has created automatic tracking schedules for field staff based on their shifts. The customer has also set up multiple Geofenced locations that can clock employees in and out automatically during shift hours without any manual involvement.

As per the customers requirements, allGeo set up custom alerts that will notify managers if a field employee is:

- Outside of a Geofenced location for more than 2 hours.

- Inside of a Geofenced location for more than 3 hours.

Managers generate a **Breadcrumb Report** through allGeo that shows the automatic check-in and out time from each Geofenced location. It also reports details of the hours and miles associated with each time clock event.

**250+**
