

## Industry

Hospital & Healthcare

## Customer

The company offers a wide range of home health care services with specially trained healthcare professionals.

## Customer need

The customer was already using allGeo's Lone Worker Safety solution to put in place a safety protocol for their remote employees. Now, they want to get real time data for their field staff's daily schedule and visits (check in and check at job sites), get their accurate mileage and generate reports for payroll and data for improving their field operations.

## New workflow with allGeo

allGeo was able to simplify the entire field service workflow for the customer by switching to its one-app solution. allGeo provides Electronic Visit Verification (EVV) and manual time clocking solutions for the healthcare providers. With the help of allGeo, they can track their employee's locations and record the service hours service hours and miles driven throughout the day. As a result of integration between allGeo and Google Sheets, they can download and directly export the report into ADP® for the payroll.

Here are the key allGeo reports they are generating:

- Breadcrumb report gives them the location trails of the employees for that particular date range.
- Time-clocking report that captures for each employee, their time clock punches and the locations for the entire work day, miles between those punches, and notes or messages if taken during that punch.
- Mileage report that captures the distance (miles) driven by the employee for that particular date range.

The second part of the workflow is to export the time & attendance data directly into their ADP payroll system. This happens through allGeo's integration with Google sheets that enables the reports to be exported into Google sheets and then importing the data directly into ADP Workforce Now®.
