Facility Management

Customer

A facility management company that provides contract-based cleaning, maintenance, and other services to clients in North America.

Customer need

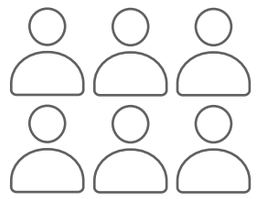

The company has employees working in multiple facilities and completing particular tasks. They wanted to track the tasks performed at each jobsite and the hours spent on each task.

New workflow with allGeo

allGeo introduced a simple and time-efficient workflow for the customer. allGeo supports task tracking with the help of QR-based check-in and check-out. Every QR code is geo-tagged and holds the task name. Field employees scan the QR code while clocking in for the task and then scan the same code again for clock-out. When the QR code scans are done, allGeo captures the activityperformed at the facility and the hours spent on the task. The new workflow helps the customer improve productivity and reduce costs with the following capabilities:

Below are some of the reports that the customergenerates in the allGeo platform:

- **Standard Manual Report:** IThis report shows the time clock punches and their locations for the entire day, miles between those punches, and any notes or messages that might be captured during that punch.
- **Barcode Message Report:** This report will show all the QR/barcode messages scanned, listing all the tasks that were performed.
- **Missed Scan Report:** Based on the customers shift timings (5am - 1:30pm; 1pm - 9:30pm; 3pm - 11:30pm; 9pm - 5:30am), a customized report shows the list of all the work orders that were not completed for a particular shift.
