Customer

Customer is a division of a leading Healthcare Holdings company with over 150,000 healthcare and other expert professionals. With over 50 years of experience, they provide a full scope of service for planning, staffing, operations, logistics, and execution for all types of crises.

Customer need

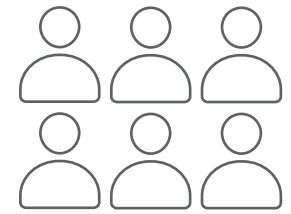

The customer is seeking a platform that fulfills specific requirements. Firstly, the platform should have the capability of enabling location tracking and QR-based time clocking. Secondly, the platform must be equipped with exception alerts. Lastly, the platform should only permit users to clock in after scanning a particular QR code. These requirements are essential to meet the customer's expectations and ensure a satisfactory user experience.

New workflow with allGeo

allGeo's new workflow enhancements have proven to be particularly useful for a premier provider of job actions and urgent need staffing in times of labor disputes. With around 300 field staff in one line of business, the company had a pressing need to monitor their employees' time and location accurately. The system's ability to recognize exceptions, including only allowing clock-ins upon scanning the correct QR code, has been particularly beneficial to the company. Additionally, the ability to generate custom reports tailored to their payroll needs has significantly streamlined their operations. Overall, the new workflow has proven to be a valuable asset in enabling efficient and accurate tracking of their field staff.

Reports

- **Standard Manual Report:** This report shows the time clock punches and their locations of the entire day, and notes or field data if taken during that punch.
- **Payroll Report v5.0:** We have also built a custom report named Payroll Report v5.0, which shows the hours segregation into Reg, Overtime, and Double Overtime.
