Retailer

Customer

The company offers skincare solutions formulated to treat the depleting and damaging effects of stress on the skin using ingredients from Iceland. They have sales reps that visit door to door to sell their products.

Customer need

They wanted a complete time and attendance solution to record the check-in and check-out hours of the sales reps. Along with this, they wanted to connect their field operations with their ADP® payroll system for a more accurate and efficient payroll process.

New workflow with allGeo

allGeo provides them a streamlined process to track the employee's location and record their punch-in and out time from the web portal. They can also keep track of employees when they enter or exit from any job site.

The new workflow helps the customer improve productivity and reduce costs with the following capabilities:

- Time clocking & accountability
- GPS + Geofence verified time clocking in and out of stores and other points of interest against ADP pay codes
- Automatic mileage logging
- Scheduling & work order dispatch via web portal (by managers)
- Custom mobile forms to log store visits including photo and signature capture
- Live map view of team status

Here are the key allGeo reports they are generating:

- Breadcrumb report gives them the location trails of the employees for that particular date range.
- Time-clocking report that captures for each employee, their time clock punches and the locations for the entire work day, miles between those punches, and notes or messages if taken during that punch.

The second part of the workflow is to export the time & attendance data directly into their ADP payroll system. This happens through allGeo's API integration with ADP Workforce Now®. The data is sent from allGeo to ADP with just one click, making their payroll process much more efficient.

With respect to the payroll process, the capabilities include:

- Pre-payroll paycode logic processing
- Payroll corrections within allGeo with manager approval
- Transfer data to ADP via reports and autosync (through allGeo's API integration with ADP Workforce Now).
