Industry

Waste Management

Customer

The company offers residential, commercial, roll off, recycling and disposal services for homes, businesses and contractors.
Customer need

They wanted to replace paper timesheets with digital timecards with paycode automation. Their drivers were paid on mileage of load and load events, therefore they wanted to log loads picked up and delivered to landfill sites. They wanted the timecards to be associated with the driver and the work order/ticket # pulled from their ERP.

New workflow with allGeo

The company turned to allGeo and its integration with ADP Workforce Now® to help meet their requirements. allGeo improved business processes by automating many functions of time logging by using digital forms and GPS tracking plus Geofencing reported against company payrate codes. allGeo would then process payrate data and report it via a compatible CSV report or autos-synch to ADP Workforce Now®, their payroll system.

Here are the key aspects of the allGeo workflow:

- Dispatch orders are sent to the driver's smartphone
- Time logging on the app that mirrors HOS
- Using QR codes to scan the driver's use of a power unit and a trailer
- Pre and post-trip inspection forms
- Digital delivery form with site/client pick list (and associated code)
- The relevant data for paycode reporting would be processed against associated paycodes
- Paycode report sent to ADP via compatible CSV report or API based auto-sync.
