Mobile Field Service Management Made Easy for Your Business

Managing the real-time location and job status of your mobile employees can be a real challenge. The allGeo service turns your employees phones into time-clockingand accountability tools, and lets you get rid of oldschool timesheets and punch clock systems.

Best of all, it's so flexible that you can customize your allGeo service. It can be as hands-off as you need, letting the service automatically track and clock yourcrews in and out at their jobsites using GPS - or it canbe part of an end-to-end solution with ERP softwareintegration, work order dispatch, field data collection and dispatch messaging.

And because it's all verified by GPS, there's no more time theft or rounding errors, and no more manual data entry errors.

With allGeo you can expect to save at least 30min of paid time per employee per day – that's easily thousands of dollars per year. The service works on any iOS or Android phone or tablet, so you don't have to invest in specil devices.

> " By implementing the allGeo system, the employees are aware that there is a sense of urgency in their workday and they're encouraged not to be counterproductive. We anticipate, when fully implemented, that each employee will increase 30 to 40 minutes perday at least in productivity."

Save More & Earn More

1. Cut costs -- Use your employees smartphones and tablets for time clocking and eliminate paper time cards.

2. Real-time GPS accountability and status – the service gives you a constantly updated GPS position of your team during the work day, plus their jobsite status

3. Mobile data collection - Use custom mobile forms, GPS-tagged photos, scans and signature capture to collect critical business information from the field

4. Field supervisor check-in tools – The allGeo app lets your supervisors "group punch" multiple employees, see everyone on a map and stay in touch by text and phone calls

5. Custom Management Alerts – Unique rules alert you when important events happen, like the arrival of your team at a jobsite, or a possible Lone Worker Safety issue so you can take immediate action.

6. Use Familiar ERP Software – allGeo uses powerful web APIs and a growing range of industry-specific ERP connectors to support software like Intuit, ADP, Sage, Concur, and more for your own "best of breed" solution.
