

Industry

Security Systems Services

Customer

They provide Integrated Security Technology to commercial, government, and residential customers, educational institutions, healthcare facilities, local and federal government, hotels, restaurants, retail stores, and financial institutions.

Customer need

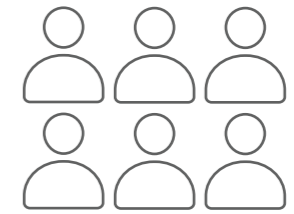

With over 100 security professionals who visit multiple locations daily, they wanted to know their employees whereabouts and track their hours and mileage. While their primary requirement was to track employees' mileage accurately, they wanted to make sure that they respected their employees' privacy by not tracking their location outside shift hours.

New Workflow with allGeo

allGeo provided the customer with a simplified process to track the employee's location and record their hours and mileage throughout the day. The employee could easily punch in and out during shift hours with the allGeo mobile app. Additionally, the allGeo app's settings for work timings ensured that they did not track employees' location outside their shift hours.

Here are some of the reports we referred to for the account implementation:

- **Breadcrumb Report** : This report gives you all the location trails of the employees for a particular date range.
- **Standard Manual Report** : This report shows the punch-in and out records along with the total hours and miles.
