

## Industry

Construction

## Customer:

A leading construction company founded over 120 years ago, this customer has established a presence in all 50 US States and over 60 countries with six subsidiaries solely focused on executing crucial infrastructure projects.

## Customer need

The customer experienced rapid growth and needed to modernize and standardize its time clocking and workforce management tools and practices across its various operating companies and projects. The customer was also finding it increasingly difficult to reconcile paper & pencil time card claims and job status claims. Each crew would submit paper time and labor logs that were often turned in late, and sometimes hard to read – and then the company's payroll team would spend days each pay period retyping and calculating job costs and payroll in multiple spreadsheets. Not only that, they had no way of easily responding to client demands for project audits and accountability. They needed to go digital and stop being limited by paper time sheets.

The customer needed a platform that fulfilled the following requirements for its two sets of users:

- A clock in/out feature that users can access through the app
- Supervisors/Foremen should be able to mark attendance for their assigned team members
- The ability for employees and Foremen to attach images (selfies) while clocking in
- Two safety-check attestations in form of a check box at the end of the shift
- Display of temperature and weather details during check-in/out.

## Modernized workflow with allGeo:

The customer's challenge of managing two distinct sets of employees was effectively addressed with the help of allGeo.

For the first group managed by the first Project Manager (PM), allGeo's app allowed associates to clock in/out, select their task and customer, and attach a selfie with each punch. The app also fetched temperature and weather information with every punch, streamlining the process for employees. Additionally, allGeo's solution enabled the employees to submit two attestations at the end of their shift, providing an efficient and secure method for verifying work.

The second PM's challenge of managing foremen and their respective employees was addressed through allGeo's workflow. The foremen were able to mark attendance for their set of employees using Crew Punching with QR scans. This solution allowed the foremen to attach an employee selfie during clock-in, providing a reliable record of attendance. Overall, allGeo's platform proved to be a valuable tool in streamlining and optimizing the customer's workforce management processes.

## No More Paper Time Clocking Headaches

The allGeo solution has helped improve overall operations, provide client accountability tools, reduced liability from payroll claims, and has improved payroll processing time and accuracy each pay period, freeing up staff to focus on other tasks that aid company growth. The American Payroll Association, for example, estimates the kind of solution implemented by allGeo typically saves 3%-5% on payroll processing errors and hundreds of hours a year spent retyping paper time cards. allGeo clients also typically gain a daily time savings of 10 min per employee per day, a 5% reduction in fuel expenses, and up to 10% boost in productivity.
